Cloud vs. Colocation: Quick Comparison

Cloud Computing

- Elastic, pay-as-you-go model
- Fast deployment
- High flexibility, potential latency
- Managed externally

V/S

Colocation Services

- Owned hardware, data center-hosted
- Complete customization
- Predictable costs
- Low-latency, direct connectivity

Key differences

Feature	Cloud computing	Colocation
Infrastructure	Virtual, managed	Physical, owned
Scalability	Instant, dynamic	Hardware-dependent
Connectivity	Global,variable latency	Dedicated, low latency
